

Interested in how the genetic information of you and your family could be used in the NHS? Want to make sure healthcare decision makers listen to patients' views on the use of genetic data?

[This project](#) will help you get to grips with what genomic sequencing is, the ways it could be used in healthcare, and why its use raises some important ethical, societal, and practical questions. Most importantly, it gives you the chance to share your views as a patient living with a cancer diagnosis, or as a family member, and be heard by those making decisions about how genomic sequencing might be incorporated into the NHS cancer care.

When and where?

The sessions will begin in January. You will not have to go anywhere to take part – all of the sessions will be delivered using free online applications so that you can take part when and where is most convenient for you. None of the sessions will last longer than 45mins and you can pause and continue whenever you like.

Who can take part?

Are you 18 or over? If you or a member of your family has been diagnosed with, is suspected to have, or has an increased predisposition to cancer we would like to hear [from you](#).

If you are interested in taking part please register by Dec 15th (register at: <https://goo.gl/qIOfJD>)

Please contact Angela Wiperman either by email (Angela.Wiperman@geneticalliance.org.uk) or by phone (020 7704 3141) if you have any questions or require more information.

My Cancer, My DNA is funded by the National Institute for Health Research (NIHR) Biomedical Research Centre at The Royal Marsden NHS Foundation Trust and The Institute of Cancer Research.

We are pleased to be collaborating with [Bloodwise](#), [Breast Cancer Now](#), [Cancer 52](#) and [Cancer Research UK](#) on this project.
